

TITAN Motorcycle Solutions

Portable radio solution with wireless connection between RSM and Handlebar PTT

TITAN MOTORCYCLE SOLUTIONS

We have developed a full Push-To-Talk system for motorcycle users wanting the optimum hands-free solution whether they are on their bike or at foot.

When on your bike, communicate freely using the Handlebar PTT while having both hands on the steering wheel. The Handlebar PTT is connected to a Wireless PTT Box, which is directly connected to the motorcycle battery.

Pairing the Wireless PTT Box with the Remote Speaker Microphone is easy and you only have to pair the devices once. Whenever you have been away from the bike, go back on it and the devices will automatically pair instantly.

REMOTE SPEAKER MICROPHONE MM20
